

Summer is here! Along with the heat, humidity and lots of opportunities to get hacked while on vacation. Traveling this summer and using public WiFi? Think again! New report found that the WiFi router used by most hotels is vulnerable to hackers. Don't let that happen to you. Just a few tips to help protect yourself.

1. Keep all secure information at home.
2. Use a password manager
3. Don't do on-line banking while on the road
4. If you've traveled in the past 10-12 months, it's a good idea to change your online banking password.

Windows 10 – Free Upgrade – Fact or Fiction

You may have seen a pop-up on the lower right corner of your screen telling you that you are eligible for a free upgrade to Windows 10. Don't panic, it's not a virus or scam (unless it asks for money). Microsoft is offering a free upgrade from Windows 7 or Windows 8 to the new 10 when it is released later this summer.

Win 10 takes the best of Windows 8 and merges it with Windows 7 familiarity and stability. You can read more about 10 with this link:
<http://www.microsoft.com/en-US/windows/features>

Want to save money?

Don't click on the many offers for coupon printers, coupon tool bars, etc. on the web! These do not save you any money, they infect your PC with malware and they also piggy back other more malicious programs that slow your machine, create numerous pop-ups, redirect your searches, hijack your home page, etc.

The mainstream retailers are safe to use. Target, WalMart, Publix, and others are OK to use. But the generic sites that promise money back, savings, etc. are all a scam. Avoid them at all cost. And how does doing this save you money? You don't have to call us to clean and tune up your PC – that saves your money!

Remember, **“We help computers with their people problems”**

See you next month! Enjoy!
